

## Take Home Task Assignment

1. Please construct a Product Details Page using HTML, CSS, and JavaScript
  - a. The page should have 2 Images of the products
  - b. One Section should have a description of the product
  - c. One Section should have a chat pop-up option at the bottom right corner where the user can click the button and a chat box will pop-up
  - d. There should be a section called review where the user can give reviews of the product.  
[ N.B- Ensure that all images uploaded by users are in a standardized format and that no photos are overflowing]
  
2. Please create a Dashboard for a user panel that will feature 3 charts to provide the user with a clear and concise overview of their sales and performance.
  - a. The Doughnut chart will display the product that the user has sold the most in descending order, providing a clear understanding of which products are performing the best.
  - b. A Line Chart will demonstrate the user's total profit based on different categories, allowing the user to identify which class is generating the most revenue quickly.
  - c. Finally, a Radar Chart will be incorporated which will highlight the top 5 product brands and the number of views that each product has received. This will provide insight into which products are most popular among customers.

[N.B: The dataset is attached in the email body]
